## 社會媒體 (social media)的定義

(Kaplan & Haenlein, 2010)

建立在Web 2.0概念與技術的基礎上，  
以網路為平台的應用系統  
(Internet-based applications)，  
讓網路使用者可以  
方便產生與交流使用者建立的內容  
(user generated content; UGC)。

## 社會媒體服務 (Social Media Services)

提供使用者在網路環境中使用  
社會媒體應用系統的線上服務  
(online services)  
Google+, Youtube, Facebook, Plurk

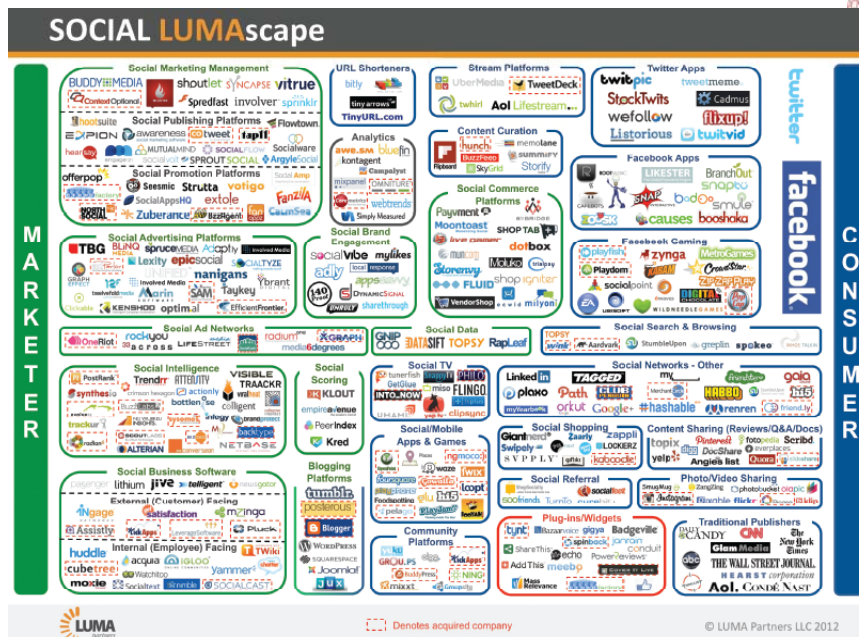

# 社群媒體發展趨勢

# THE WEB 2.0 REVOLUTION, SOCIAL MEDIA, AND INDUSTRY DISRUPTORS

# Web 2.0

- The popular term for **advanced Internet technology and applications**, including blogs, wikis, RSS, and social bookmarking.
- One of the most significant differences between Web 2.0 and the traditional World Wide Web is greater **collaboration** among Internet users and other users, content providers, and enterprises.

## THE WEB 2.0 REVOLUTION, SOCIAL MEDIA, AND INDUSTRY DISRUPTORS

- REPRESENTATIVE CHARACTERISTICS OF WEB 2.0
  - The ability to tap into the collective intelligence of users
  - Data is made available in new or never-intended ways
  - Web 2.0 relies on **user-generated** and **user-controlled content** and **data**
  - The virtual elimination of software-update cycles makes everything a *work in progress* and allows rapid prototyping

## THE WEB 2.0 REVOLUTION, SOCIAL MEDIA, AND INDUSTRY DISRUPTORS

- Users can access applications entirely through a browser
- An architecture of participation encourages users to add value to the application
- A major emphasis on social networks and computing
- Strong support of information sharing and collaboration
- Rapid and continuous creation of new business models

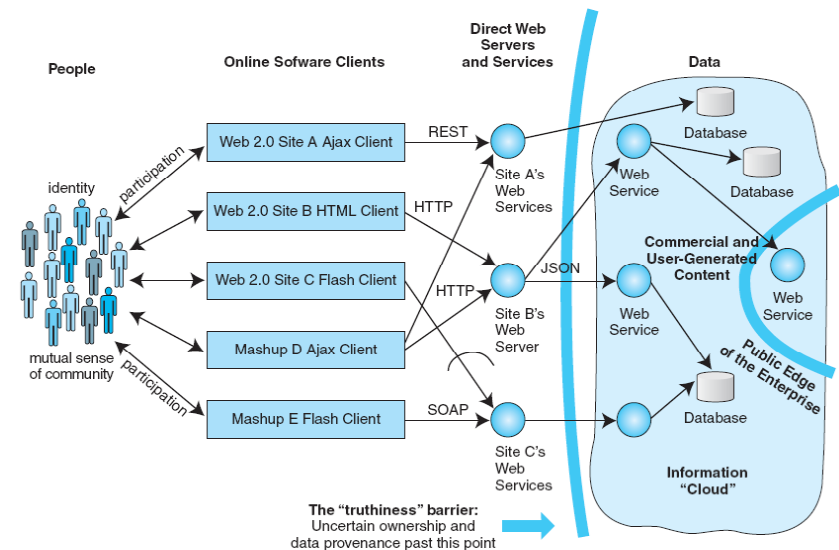

## THE WEB 2.0 REVOLUTION, SOCIAL MEDIA, AND INDUSTRY DISRUPTORS

- WEB 2.0 COMPANIES AND NEW BUSINESS MODELS

- **social media**

The **online platforms and tools** that people use to **share opinions, experiences, insights, perceptions, and various media**, including photos, videos, and music, with each other.

### EXHIBIT 7.1 The Emergence and Rise of Mass Social Media

## THE WEB 2.0 REVOLUTION, SOCIAL MEDIA, AND INDUSTRY DISRUPTORS

- **INDUSTRY AND MARKET DISRUPTORS**

- **disruptors**

Companies that introduce a significant change in their industries, thus causing a disruption in normal business operations.

## ONLINE SOCIAL NETWORKING: BASICS AND EXAMPLES

- **social networking**

Social networks and activities conducted in social networks. It also includes activities conducted using Web 2.0 (e.g., wikis, microblogs) not within social networks.

- **The Size of Social Network Sites**

- **New Business Models**

### EXHIBIT 7.4 The Top Nine Social Networking Sites

## ONLINE SOCIAL NETWORKING: BASICS AND EXAMPLES

- **social network analysis (SNA)**

The mapping and measuring of relationships and information flows among people, groups, organizations, computers, and other information- or knowledge-processing entities. The nodes in the network are the people and groups, whereas the links show relationships or flows between the nodes. SNAs provide both visual and a quantitative analysis of relationships.

## BUSINESS AND ENTERPRISE SOCIAL NETWORKS

- The major reasons to use or deploy a business social network are to:
  - Build better customer relationships
  - Improve knowledge management
  - Facilitate recruiting and retention
  - Increase business opportunities
  - Build a community
  - Gain expert advice
  - Improve trade show experiences
  - Improve communication and collaboration

## THE FUTURE: WEB 3.0 AND WEB 4.0

- **Web 3.0**

A term used to describe the future of the World Wide Web. It consists of the creation of high-quality content and services produced by gifted individuals using Web 2.0 technology as an enabling platform.

## THE FUTURE: WEB 3.0 AND WEB 4.0

- **Semantic Web**

An evolving extension of the Web in which Web content can be expressed not only in natural language, but also in a form that can be understood, interpreted, and used by intelligent computer software agents, permitting them to find, share, and integrate information more easily.

## THE FUTURE: WEB 3.0 AND WEB 4.0

- **Web 4.0**

The Web generation after Web 3.0. It is still mostly an unknown entity. However, it is envisioned as being based on islands of intelligence and as being ubiquitous.

- **Future Threats**

- Security concerns
- Lack of Net neutrality
- Copyright complaints
- Choppy connectivity

## COMMERCIAL ASPECTS OF WEB 2.0 AND SOCIAL NETWORKING APPLICATIONS

- **WHY IS THERE AN INTEREST?**
  - Web 2.0 applications are spreading rapidly, and many of them cater to a specific *segment of the population* (e.g., music lovers, travelers, game lovers, and car fans), enabling segmented advertising
  - Many users of Web 2.0 tools are young, and they will grow older and have more money to spend

## COMMERCIAL ASPECTS OF WEB 2.0 AND SOCIAL NETWORKING APPLICATIONS

- **ADVERTISING USING SOCIAL NETWORKS, BLOGS, AND WIKIS**
  - **Viral (Word-of-Mouth) Marketing**
    - viral blogging
      - Viral (word-of-mouth) marketing done by bloggers.
  - **Classified Ads, Job Listings, and Recruitment**
  - **Special Advertising Campaigns**
  - **Mobile Advertising**

## COMMERCIAL ASPECTS OF WEB 2.0 AND SOCIAL NETWORKING APPLICATIONS

- **SHOPPING IN SOCIAL NETWORKS**
- **FEEDBACK FROM CUSTOMERS: CONVERSATIONAL MARKETING**
  - **Customer Feedback with Twitter**

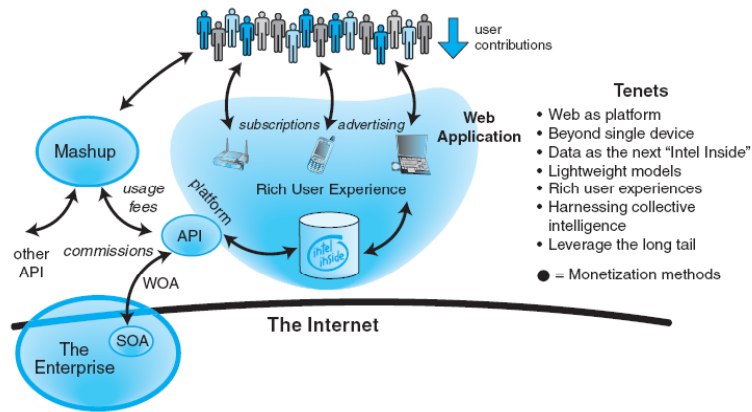

## COMMERCIAL ASPECTS OF WEB 2.0 AND SOCIAL NETWORKING APPLICATIONS

- **COMMERCIAL ACTIVITIES IN BUSINESS AND ENTERPRISE SOCIAL NETWORKS**
  - **Finding and Recruiting Workers**
  - **Management Activities and Support**
  - **Training**
  - **Knowledge Management and Expert Location**
  - **Enhancing Collaboration**
  - **Using Blogs and Wikis Inside the Enterprise**

48

## Social Media Word-of-Mouth Marketing

49

## How to Start Buzz

- Identify influential individuals and companies and devote extra effort to them
- Supply key people with product samples
- Work through community influentials
- Develop **word-of-mouth** referral channels to build business
- Provide compelling information that customers want to pass along

Source: Kotler and Keller (2008)

50

## Word-of-Mouth Marketing

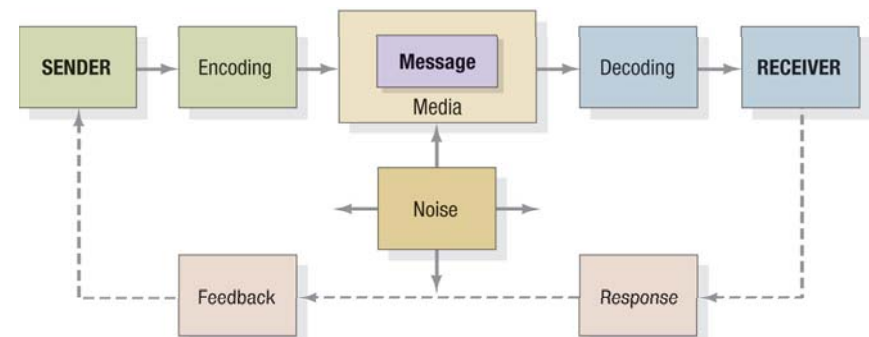

- Person-to-person
- Chat rooms
- Blogs
- Twitter, Plurk
- Facebook
- Youtube

Source: Kotler and Keller (2008)

51

# Scorecard for Social Media

Social Media Tool	Internal Value	External Value
Facebook	4 3 2 1 0	4 3 2 1 0
LinkedIn	4 3 2 1 0	4 3 2 1 0
Blogger	4 3 2 1 0	4 3 2 1 0
SlideShare	4 3 2 1 0	4 3 2 1 0
Wikipedia	4 3 2 1 0	4 3 2 1 0
Flickr	4 3 2 1 0	4 3 2 1 0
Picasa	4 3 2 1 0	4 3 2 1 0
iTunes	4 3 2 1 0	4 3 2 1 0
Podcast	4 3 2 1 0	4 3 2 1 0
Youtube	4 3 2 1 0	4 3 2 1 0
Twitter	4 3 2 1 0	4 3 2 1 0
Plurk	4 3 2 1 0	4 3 2 1 0

Scorecard for Social Media  
4 - Extremely Valuable, 3 - Very Valuable, 2 - Somewhat Valuable, 1 - Not Very Valuable, 0 - No Value

Source: Safko and Brake (2009)

# Social Media and the Voice of the Customer

- Listen to the **Voice of the Customer (VoC)**
  - Social media can give companies a torrent of highly valuable customer feedback.
  - Such input is largely free
  - Customer feedback issued through social media is qualitative data, just like the data that market researchers derive from focus group and in-depth interviews
  - Such qualitative data is in digital form – in text or digital video on a web site.

Source: Robert Wollan, Nick Smith, Catherine Zhou, The Social Media Management Handbook, John Wiley, 2011.

# Accenture's SLOPE Model for Listening to the Social Voice of the Customer

Source: Robert Wollan, Nick Smith, Catherine Zhou, The Social Media Management Handbook, John Wiley, 2011.

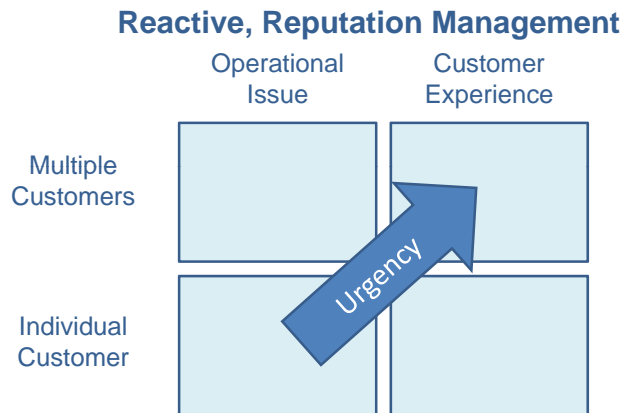

# Listen and Learn Text Mining for VoC

- Categorization
  - Understanding what topics people are talking or writing about in the unstructured portion of their feedback.
- Sentiment Analysis
  - Determining whether people have **positive**, **negative**, or **neutral** views on those topics.

Source: Robert Wollan, Nick Smith, Catherine Zhou, The Social Media Management Handbook, John Wiley, 2011.

78

# Text Mining

- Text mining (text data mining)
  - the process of deriving high-quality information from text
- Typical text mining tasks
  - text categorization
  - text clustering
  - concept/entity extraction
  - production of granular taxonomies
  - sentiment analysis
  - document summarization
  - entity relation modeling
    - i.e., learning relations between named entities.

[http://en.wikipedia.org/wiki/Text\\_mining](http://en.wikipedia.org/wiki/Text_mining)

79

# Web Mining

- Web mining
  - discover useful information or knowledge from the **Web hyperlink structure, page content, and usage data.**
- Three types of web mining tasks
  - Web structure mining
  - Web content mining
  - Web usage mining

Source: Bing Liu (2009) Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data

80

## Natural Language Processing (NLP)

- Structuring a collection of text
  - **Old approach**: bag-of-words
  - **New approach**: natural language processing
- NLP is ...
  - a very important concept in text mining
  - a subfield of artificial intelligence and computational linguistics
  - the studies of "understanding" the natural human language
- **Syntax** versus **semantics** based text mining

## Opinion Mining and Sentiment Analysis

- Mining opinions which indicate **positive** or **negative** sentiments
- Analyzes people's opinions, appraisals, attitudes, and emotions toward entities, individuals, issues, events, topics, and their attributes.

## Opinion Mining and Sentiment Analysis

- Computational study of opinions, sentiments, subjectivity, evaluations, attitudes, appraisal, affects, views, emotions, etc., expressed in text.
  - Reviews, blogs, discussions, news, comments, feedback, or any other documents

## Terminology

- Sentiment Analysis is more widely used in industry
- Opinion mining / Sentiment Analysis are widely used in academia
- Opinion mining / Sentiment Analysis can be used interchangeably

## Example of Opinion: review segment on iPhone

"I bought an iPhone a few days ago.  
It was such a nice phone.  
The touch screen was really cool.  
The voice quality was clear too.  
However, my mother was mad with me as I did not tell  
her before I bought it.  
She also thought the phone was too expensive, and  
wanted me to return it to the shop. ..."

## Example of Opinion: review segment on iPhone

- "(1) I bought an iPhone a few days ago.  
(2) **It was such a nice phone.**  
(3) **The touch screen was really cool.** +Positive  
Opinion  
(4) **The voice quality was clear too.**  
(5) **However, my mother was mad with me as I did not  
tell her before I bought it.**  
(6) **She also thought the phone was too expensive, and  
wanted me to return it to the shop. ..."** -Negative  
Opinion

## Why are opinions important?

- "Opinions" are key influencers of our behaviors.
- Our beliefs and perceptions of reality are conditioned on **how others see the world.**
- Whenever we need to **make a decision**, we often seek out the **opinion of others.**  
In the past,
  - Individuals
    - Seek opinions from friends and family
  - Organizations
    - Use surveys, focus groups, opinion pools, consultants

## Word-of-mouth on the Social media

- Personal experiences and opinions about anything in reviews, forums, blogs, micro-blog, **Twitter.**
- Posting at social networking sites, e.g., **Facebook**
- Comments about articles, issues, topics, reviews.

## Social media + beyond

- **Global scale**
  - No longer – one’s circle of friends.
- **Organization internal data**
  - Customer feedback from emails, call center
- **News and reports**
  - Opinions in news articles and commentaries

## Applications of Opinion Mining

- **Businesses and organizations**
  - Benchmark products and services
  - Market intelligence
    - Business spend a huge amount of money to find consumer opinions using consultants, surveys, and focus groups, etc.
- **Individual**
  - Make decision to buy products or to use services
  - Find public opinions about political candidates and issues
- **Ads placements:** Place ads in the social media content
  - Place an ad if one praises a product
  - Place an ad from a competitor if one criticizes a product
- **Opinion retrieval:** provide general search for opinions.

## Research Area of Opinion Mining

- **Many names and tasks** with difference objective and models
  - **Sentiment analysis**
  - **Opinion mining**
  - Sentiment mining
  - Subjectivity analysis
  - Affect analysis
  - Emotion detection
  - Opinion spam detection

96

## Sentiment Analysis

- Sentiment
  - A thought, view, or attitude, especially one based mainly on emotion instead of reason
- Sentiment Analysis
  - opinion mining
  - use of natural language processing (NLP) and computational techniques to automate the extraction or classification of sentiment from typically unstructured text

## Applications of Sentiment Analysis

- Consumer information
  - Product reviews
- Marketing
  - Consumer attitudes
  - Trends
- Politics
  - Politicians want to know voters' views
  - Voters want to know politicians' stances and who else supports them
- Social
  - Find like-minded individuals or communities

101

## Sentiment detection

- How to interpret features for sentiment detection?
  - Bag of words (IR)
  - Annotated lexicons (WordNet, SentiWordNet)
  - Syntactic patterns
- Which features to use?
  - Words (unigrams)
  - Phrases/n-grams
  - Sentences

102

## Problem statement of Opinion Mining

- **Two aspects of abstraction**
  - Opinion definition
    - What is an opinion?
    - What is the structured definition of opinion?
  - Opinion summarization
    - Opinions are subjective
      - An opinion from a single person (unless a VIP) is often not sufficient for action
    - We need opinions from many people, and thus opinion summarization.

103

## Abstraction (1) : what is an opinion?

- Id: **Abc123** on **5-1-2008** "*I bought an iPhone a few days ago. It is such a nice phone. The touch screen is really cool. The voice quality is clear too. It is much better than my old Blackberry, which was a terrible phone and so difficult to type with its tiny keys. However, my mother was mad with me as I did not tell her before I bought the phone. She also thought the phone was too expensive, ...*"
- One can look at this review/blog at the
  - Document level
    - Is this review + or -?
  - Sentence level
    - Is each sentence + or -?
  - Entity and feature/aspect level

104

## Entity and aspect/feature level

- Id: **Abc123** on **5-1-2008** “I bought an **iPhone** a few days ago. It is such a **nice phone**. The **touch screen** is really **cool**. The **voice quality** is **clear** too. It is much **better** than my old **Blackberry**, which was a **terrible phone** and so **difficult to type** with its **tiny keys**. However, **my mother** was **mad** with me as I did not tell her before I bought the phone. She also thought the **phone** was too **expensive**, ...”
- **What do we see?**
  - **Opinion targets:** entities and their features/aspects
  - **Sentiments:** positive and negative
  - **Opinion holders:** persons who hold the opinions
  - **Time:** when opinion are expressed

## Two main types of opinions

- **Regular opinions:** Sentiment/Opinion expressions on some target entities
  - **Direct opinions:** sentiment expressions on one object:
    - “The **touch screen** is really **cool**.”
    - “The **picture quality** of this **camera** is **great**”
  - **Indirect opinions:** comparisons, relations expressing similarities or differences (objective or subjective) of more than one object
    - “phone X is cheaper than phone Y.” (objective)
    - “phone X is better than phone Y.” (subjective)
- **Comparative opinions:** comparisons of more than one entity.
  - “**iPhone** is **better** than **Blackberry**.”

## Subjective and Objective

- **Objective**
  - An objective sentence expresses some **factual information** about the world.
  - “I **returned** the phone yesterday.”
  - Objective sentences can implicitly indicate opinions
    - “The **earphone** **broke** in two days.”
- **Subjective**
  - A subjective sentence expresses some **personal feelings** or **beliefs**.
  - “The voice on my phone was **not** so **clear**”
  - Not every subjective sentence contains an opinion
    - “I wanted a phone with **good** **voice quality**”
- → **Subjective analysis**

## Sentiment Analysis vs. Subjectivity Analysis

Sentiment Analysis	Subjectivity Analysis
Positive	Subjective
Negative	
Neutral	Objective

## A (regular) opinion

- **Opinion** (a restricted definition)
  - An opinion (regular opinion) is simply a **positive or negative** sentiment, view, attitude, emotion, or appraisal about **an entity or an aspect of the entity** from an **opinion holder**.
- **Sentiment orientation of an opinion**
  - Positive, negative, or neutral (no opinion)
  - Also called:
    - Opinion orientation
    - Semantic orientation
    - Sentiment polarity

## Entity and aspect

- Definition of **Entity**:
  - An **entity e** is a product, person, event, organization, or topic.
  - e is represented as
    - A hierarchy of components, sub-components.
    - Each node represents a components and is associated with a set of attributes of the components
- An opinion can be expressed on any node or attribute of the node
- **Aspects(features)**
  - represent both components and attribute

## Entity and aspect

## Opinion definition

- An opinion is a quintuple  $(e_j, a_{jk}, so_{ijkl}, h_i, t_l)$  where
  - $e_j$  is a target **entity**.
  - $a_{jk}$  is an **aspect/feature** of the entity  $e_j$ .
  - $so_{ijkl}$  is the **sentiment** value of the **opinion** from the opinion holder on feature of entity at time.
    - $so_{ijkl}$  is +ve, -ve, or neu, or more granular ratings
  - $h_i$  is an opinion **holder**.
  - $t_l$  is the **time** when the opinion is expressed.

## Opinion definition

- An opinion is a quintuple

$(e_j, a_{jk}, so_{ijkl}, h_i, t_l)$

where

- $e_j$  is a target entity.
  - $a_{jk}$  is an aspect/feature of the entity  $e_j$ .
  - $so_{ijkl}$  is the sentiment value of the opinion from the opinion holder on feature of entity at time.  
 $so_{ijkl}$  is +ve, -ve, or neu, or more granular ratings
  - $h_i$  is an opinion holder.
  - $t_l$  is the time when the opinion is expressed.
- $(e_j, a_{jk})$  is also called opinion target

Source: Bing Liu (2011), "Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data," Springer, 2nd Edition,

113

## Terminologies

- Entity: object
- Aspect: feature, attribute, facet
- Opinion holder: opinion source
  
- Topic: entity, aspect
  
- Product features, political issues

Source: Bing Liu (2011), "Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data," Springer, 2nd Edition,

114

## Subjectivity and Emotion

- Sentence subjectivity
  - An objective sentence presents some factual information, while a subjective sentence expresses some personal feelings, views, emotions, or beliefs.
- Emotion
  - Emotions are people's subjective feelings and thoughts.

Source: Bing Liu (2011), "Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data," Springer, 2nd Edition,

115

## Emotion

- Six main emotions
  - Love
  - Joy
  - Surprise
  - Anger
  - Sadness
  - Fear

Source: Bing Liu (2011), "Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data," Springer, 2nd Edition,

116

## Abstraction (2): opinion summary

- With a lot of opinions, a summary is necessary.
  - A multi-document summarization task
- For factual texts, summarization is to select the most important facts and present them in a sensible order while avoiding repetition
  - 1 fact = any number of the same fact
- But for opinion documents, it is different because opinions have a quantitative side & have targets
  - 1 opinion <> a number of opinions
  - Aspect-based summary is more suitable
  - Quintuples form the basis for opinion summarization

## An aspect-based opinion summary

Cellular phone 1:

Aspect: **GENERAL**

Positive: 125 <individual review sentences>

Negative: 7 <individual review sentences>

Aspect: **Voice quality**

Positive: 120 <individual review sentences>

Negative: 8 <individual review sentences>

Aspect: **Battery**

Positive: 80 <individual review sentences>

Negative: 12 <individual review sentences>

...

## Visualization of aspect-based summaries of opinions

## Visualization of aspect-based summaries of opinions

## Classification Based on Supervised Learning

- Sentiment classification
  - Supervised learning Problem
  - Three classes
    - *Positive*
    - *Negative*
    - *Neutral*

## Opinion words in Sentiment classification

- topic-based classification
  - topic-related words are important
    - e.g., *politics, sciences, sports*
- Sentiment classification
  - topic-related words are unimportant
  - **opinion words** (also called **sentiment words**)
    - that indicate **positive** or **negative** opinions are important,  
e.g., *great, excellent, amazing, horrible, bad, worst*

## Features in Opinion Mining

- *Terms and their frequency*
  - *TF-IDF*
- *Part of speech (POS)*
  - Adjectives
- *Opinion words and phrases*
  - *beautiful, wonderful, good, and amazing are positive opinion words*
  - *bad, poor, and terrible are negative opinion words.*
  - opinion phrases and idioms,  
e.g., *cost someone an arm and a leg*
- *Rules of opinions*
- *Negations*
- *Syntactic dependency*

## Rules of opinions

### Syntactic template

<subj> passive-verb  
<subj> active-verb  
active-verb <dobj>  
noun aux <dobj>  
passive-verb prep <np>

### Example pattern

<subj> was satisfied  
<subj> complained  
endorsed <dobj>  
fact is <dobj>  
was worried about <np>

## A Brief Summary of Sentiment Analysis Methods

Study	Analysis Task	Sentiment Identification		Sentiment Aggregation		Nature of Measure
		Method	Level	Method	Level	
Hu and Li, 2011	Polarity	ML (Probabilistic model)	Snippet			Valence
Li and Wu, 2010	Polarity	Lexicon/Rule	Phrase	Sum	Snippet	Valence
Theilwall et al., 2010	Polarity	Lexicon/Rule	Sentence	Max & Min	Snippet	Range
Boiy and Moens, 2009	Both	ML (Cascade ensemble)	Sentence			Valence
Chung 2009	Polarity	Lexicon	Phrase	Average	Sentence	Valence
Wilson, Wiebe, and Hoffmann, 2009	Both	ML (SVM, AdaBoost, Rule, etc.)	Phrase			Valence
Zhang et al., 2009	Polarity	Lexicon/Rule	Sentence	Weighted average	Snippet	Valence
Abbasi, Chen, and Salem, 2008	Polarity	ML (GA + feature selection)	Snippet			Valence
Subrahmanian and Reforgiato, 2008	Polarity	Lexicon/Rule	Phrase	Rule	Snippet	Valence
Tan and Zhang 2008	Polarity	ML (SVM, Winnow, NB, etc.)	Snippet			Valence
Airolti, Bai, and Padman, 2007	Polarity	ML (Markov Blanket)	Snippet			Valence
Das and Chen, 2007	Polarity	ML (Bayesian, Discriminate, etc.)	Snippet	Average	Daily	Valence
Liu et al., 2007	Polarity	ML (PLSA)	Snippet			Valence
Kennedy and Inkpen, 2006	Polarity	Lexicon/Rule, ML (SVM)	Phrase	Count	Snippet	Valence
Mishne 2006	Polarity	Lexicon	Phrase	Average	Snippet	Valence
Liu et al., 2005	Polarity	Lexicon/Rule	Phrase	Distribution	Object	Range
Mishne 2005	Polarity	ML (SVM)	Snippet			Valence
Popescu and Etzioni 2005	Polarity	Lexicon/Rule	Phrase			Valence
Efron 2004	Polarity	ML (SVN, NB)	Snippet			Valence
Wilson, Wiebe, and Hwa, 2004	Both	ML (SVM, AdaBoost, Rule, etc.)	Sentence			Valence
Nigam and Hurst 2004	Polarity	Lexicon/Rule	Chunk	Rule	Sentence	Valence
Dave, Lawrence, and Pennock, 2003	Polarity	ML (SVM, Rainbow, etc.)	Snippet			Valence
Nasukawa and Yi 2003	Polarity	Lexicon/Rule	Phrase	Rule	Sentence	Valence
Yi et al., 2003	Polarity	Lexicon/Rule	Phrase	Rule	Sentence	Valence
Yu and Hatzivassiloglou 2003	Both	ML (NB) + Lexicon/Rule	Phrase	Average	Sentence	Valence
Pang, Lee, and Vaithyanathan 2002	Polarity	ML (SVM, MaxEnt, NB)	Snippet			Valence
Subasic and Huettner 2001	Polarity	Lexicon/Fuzzy logic	Phrase	Average	Snippet	Valence
Turney 2001	Polarity	Lexicon/Rule	Phrase	Average	Snippet	Valence

(Both = Subjectivity and Polarity; ML= Machine Learning; Lexicon/Rule= Lexicon enhanced by linguistic rules)
